Applicant(s)

GOSS ET AL.

Examiner

Joseph D Nguyen

Art Unit

2683

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☒ Responsive to communication(s) filed on 14 June 2001.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## Disposition of Claims

- 4) ☒ Claim(s) 1-20 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-20 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

## Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 14 June 2001 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

## Priority under 35 U.S.C. §§ 119 and 120

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.
- 13) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application) since a specific reference was included in the first sentence of the specification or in an Application Data Sheet. 37 CFR 1.78.
- a) ☐ The translation of the foreign language provisional application has been received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121 since a specific reference was included in the first sentence of the specification or in an Application Data Sheet. 37 CFR 1.78.

## Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) \_\_\_\_\_
- 4) ☐ Interview Summary (PTO-413) Paper No(s). \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_\_

## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-6, 10, 11-16, and 20 are rejected under 35 U.S.C. 102(e) as being anticipated by Goss et al. (6,658,25).

Regarding claim 1, Goss et al. discloses in a mobile cellular switching network, a method of establishing a cellular call fig. 1) comprising the steps of:

a) if a traffic channel for a mobile station (MS) is available, establishing said call over the available channel (abstract, fig. 2-3);

b) if no channel is available, permitting the caller to disconnect while the network waits for a channel to become available (abstract, fig. 2-3, col. 3 line 46 thru col. 4 line 11);

c) when a channel becomes available for said call, calling back (return indicate) the caller, and establishing the requested call (abstract, fig. 2-3, col. 3 line 46 thru col. 4 line 59).

Regarding claim 2, Goss et al. further discloses the method of claim 1, wherein prior to having said caller disconnect, the system tests to determine whether the expected wait time for an available channel exceeds a first threshold (abstract, fig. 2-3); and offering call-back service only for those cases in which the expected wait time exceeds said first threshold (abstract, fig. 2-3, col. 3 line 46 thru col. 4 line 59).

Regarding claim 3, Goss et al. further discloses the method of claim 1, further comprising the step of: prior to calling said caller back, testing whether the called party is busy (fig. 2-3, col. 3 line 46 thru col. 4 line 59); if the called party is busy, avoiding the attempt to establish a connection to the called party (fig. 2-3, col. 3 line 46 thru col. 4 line 59).

Regarding claim 4, Goss et al. further discloses the method of claim 3, further comprising the step of: returning a busy signal to the calling party (fig. 2-3, col. 3 line 46 thru col. 4 line 59).

Regarding claim 5, Goss et al. further discloses The method of claim 1, wherein prior to having said caller disconnect, the system tests to determine whether the expected wait time for an available channel exceeds a first threshold (abstract, fig. 2-3, col. 3 line 46 thru col. 4 line 59); if the expected wait time for an available channel exceeds a first threshold (col. 3 lines 46 thru col. 4 lines 12), offering call-back service to

the caller; if the expected wait time does not exceed a first threshold (abstract), the system waits until the lapse of a second threshold smaller than that first threshold (col. 3 lines 46 thru col. 4 lines 12); and if no channel is available after the lapse of the second threshold, offering call-back service to the caller (fig. 2-3, col. 3 lines 46 thru col. 4 lines 12).

Regarding claim 6, Goss et al. further discloses the method of claim 1, wherein the step of calling back the caller comprises the step of: calling back the caller, using a distinctive ringing signal (generating tones) (col. 3 lines 8-31).

Regarding claim 10, Goss et al. further discloses the method of claim 1, further comprising the steps of: retaining a call record of said call during the interval between the time that the caller disconnects and a time when the caller is called back; wherein said call record comprises a calling and a called number (it is possible to send status messages with queuing options to the caller) (col. 3 line 45 thru col. 4 line 42).

Regarding claim 11, Goss et al. discloses in a mobile cellular switching network, an apparatus for establishing a cellular call (abstract, fig. 1) comprising the steps of:

a) if a traffic channel for a mobile station (MS) is available, establishing said call over the available channel (abstract, fig. 2-3);

b) if no channel is available, permitting the caller to disconnect while the network waits for a channel to become available (abstract, fig. 2-3, col. 3 line 46 thru col. 4 line 11);

Art Unit: 2683

c) when a channel becomes available for said call, calling back (return indicate) the caller, and establishing the requested call (abstract, fig. 2-3, col. 3 line 46 thru col. 4 line 59).

Regarding claim 12, this claim is rejected for the same reason as set forth in claim 2.

Regarding claim 13, this claim is rejected for the same reason as set forth in claim 3.

Regarding claim 14, this claim is rejected for the same reason as set forth in claim 4.

Regarding claim 15, this claim is rejected for the same reason as set forth in claim 5.

Regarding claim 16, this claim is rejected for the same reason as set forth in claim 6.

Regarding claim 19, this claim is rejected for the same reason as set forth in claim 9.

Regarding claim 20, this claim is rejected for the same reason as set forth in claim 10.

*Claim Rejections - 35 USC § 103*

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 7-9, 17-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Goss et al. (6,658,255) in view of Chow et al (6,654,615).

Regarding claim 7, Goss et al. further discloses the method of claim 1, wherein the service of calling back the caller (col. 3 lines 46 thru col. 4 lines 12). However Goss et al. does not specifically disclose the call back the caller is offered only to subscribers of that service.

Chow et al. teaches the call back the caller is offered only to subscribers of that service (col. 82 line 48 thru col. 86 line 44). Therefore, it would have been obvious to one skilled in the art at the time the invention was made to modify Goss et al. system with the teaching of Chow et al. of call back service in order to free the user from re-dialing the same busy number or unavailable channel repeatedly.

Regarding claim 8, Chow et al. further discloses the method of claim 7, wherein subscribers of said service are provided with a default treatment, and wherein subscribers of that service can override the default treatment; wherein the default treatment is one of automatic call-back, and no call-back (col. 82 line 48 thru col. 86 line

Art Unit: 2683

44). Therefore, it would have been obvious to one skilled in the art at the time the invention was made to modify Goss et al. system with the teaching of Chow et al. of call back service in order to free the user from re-dialing the same busy number or unavailable channel repeatedly.

Regarding claim 9, Goss et al. further discloses the method of claim 1. However, Goss et al. does not specifically disclose wherein if the caller originates a new call while waiting for a call-back, the call-back request is canceled.

Chow et al. teaches if the caller originates a new call while waiting for a call-back, the call-back request is canceled (col. 86 line 31 thru col. 90 line 8). Therefore, it would have been obvious to one skilled in the art at the time the invention was made to modify Goss et al. system with the teaching of Chow et al. of call back service in order to free the user from re-dialing the same busy number or unavailable channel repeatedly.

Regarding claim 17, this claim is rejected for the same reason as set forth in claim 7.

Regarding claim 18, this claim is rejected for the same reason as set forth in claim 8.

Regarding claim 19, this claim is rejected for the same reason as set forth in claim 9.

### *Conclusion*

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The Friedes et al. (5,311,583) reference discloses a method of establishing a call comprising the steps of: if a traffic channel for a is available, establishing said call over the available channel; if no channel is available, permitting the caller to disconnect while the network waits for a channel to become available; when a channel becomes available for said call, calling back the caller, and establishing the requested call (abstract, fig. 2-6), wherein prior to having said caller disconnect, the system tests to determine whether the expected wait time for an available channel exceeds a first threshold; and offering call-back service only for those cases in which the expected wait time exceeds said first threshold (fig. 2-6), the step of: prior to calling said caller back, testing whether the called party is busy; if the called party is busy, avoiding the attempt to establish a connection to the called party (fig. 2-6), the step of: returning a busy signal to the calling party (fig. 5), wherein prior to having said caller disconnect, the system tests to determine whether the expected wait time for an available channel exceeds a first threshold; if the expected wait time for an available channel exceeds a first threshold, offering call-back service to the caller; if the expected wait time does not exceed a first threshold, the system waits until the lapse of a second threshold smaller than that first threshold; and if no channel is available after the lapse of the second threshold, offering call-back service to the caller (abstract, fig. 2-6, col. 3 line 59 thru col. 8 lines 29), the step of calling back the caller comprises the step of:

Art Unit: 2683

calling back the caller, using a distinctive ringing signal (col. 3 lines 36-58), wherein the service of calling back the caller is offered only to subscribers of that service ((abstract, fig. 2-6, col. 3 line 59 thru col. 8 lines 29), wherein subscribers of said service are provided with a default treatment, and wherein subscribers of that service can override the default treatment; wherein the default treatment is one of automatic call-back, and no call-back (col. 4 line 44 thru col. 5 line 4), wherein if the caller originates a new call while waiting for a call-back, the call-back request is canceled (col. 6 lines 32-67), the steps of: retaining a call record of said call during the interval between the time that the caller disconnects and a time when the caller is called back; wherein said call record comprises a calling and a called number (fig. 2-6, col. 3 line 59 thru col. 8 lines 29).

6. Any response to this action should be mailed to:

Commissioner of Patents and Trademarks

Washington, D.C. 20231

Or faxed to:

703 308-9051, (for formal communication intended for entry)

Or:

(703) 305-9509 (for informal or draft communications, please label

"PROPOSED" OR "DRAFT")

Hand-delivered responses should be brought to Crystal Park II, 2121

Crystal Drive, Arlington, VA. Sixth floor (Receptionist).

Art Unit: 2683

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph D Nguyen whose telephone number is (703) 605-1301. The examiner can normally be reached on 7:00 AM to 4:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, William Trost can be reached on (703) 308-5318. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9314 for regular communications and (703) 872-9314 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 306-0377.
